

$$41) \sin t = \frac{4}{5}$$

- a) $\sin(\pi - t) = \frac{4}{5}$
 b) $\sin(t + \pi) = -\frac{4}{5}$

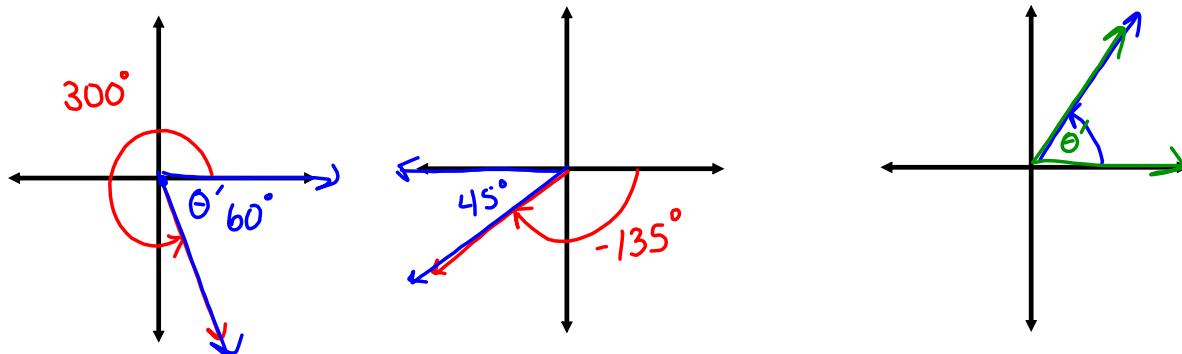

Section 4.4 Trigonometric functions of any angle

Reference Angle: acute, positive, vertex at origin, rays are terminal side of θ and x-axis.

Find the reference angle:

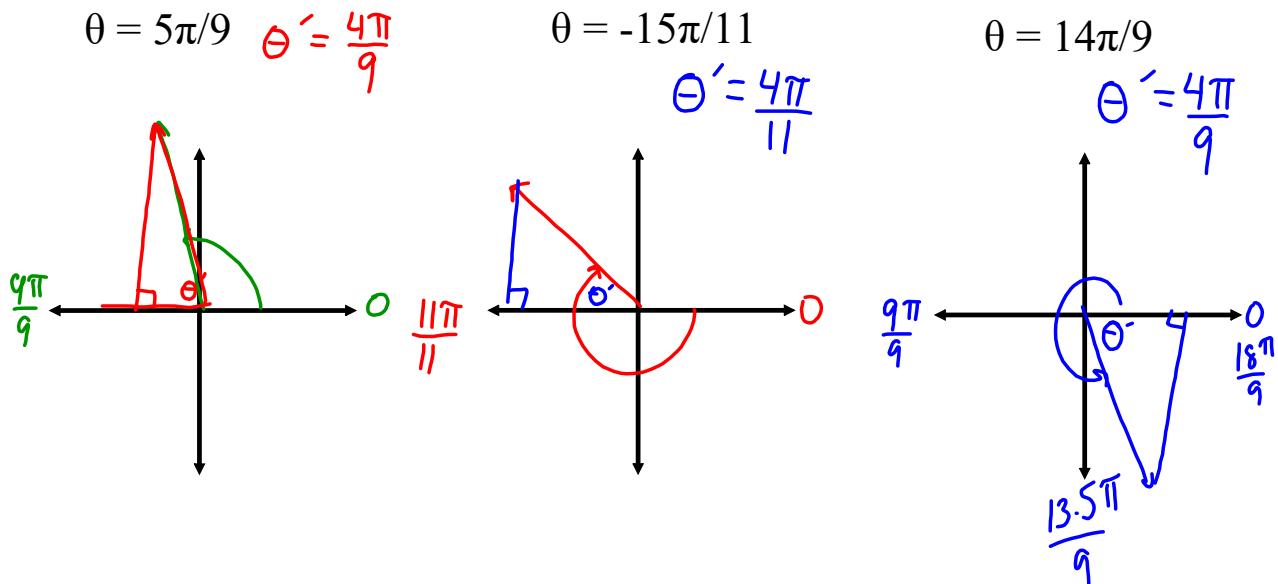

$$\theta = 300^\circ \text{ ref. } \angle = 60^\circ \quad \theta = -135^\circ \text{ ref. } \angle = 45^\circ$$

$$\theta = 63^\circ \text{ ref. } \angle = 63^\circ$$

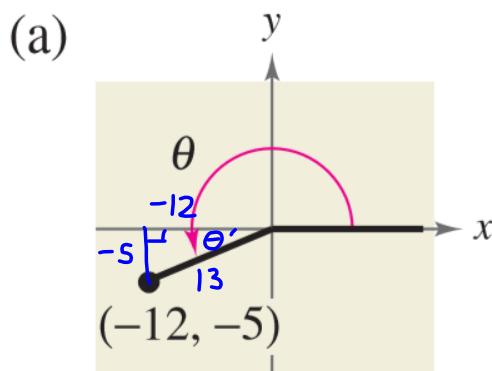

Reference triangle: terminal side is hypotenuse, one leg is x-axis, θ is at the origin

Draw the reference triangle and find the reference angle:

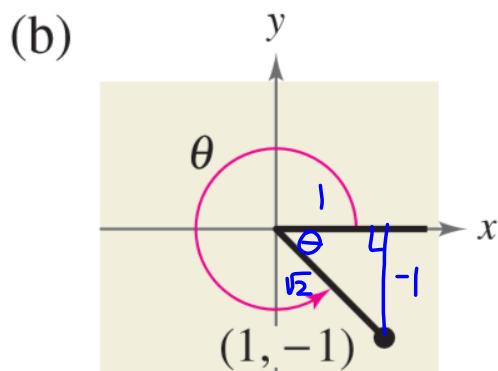

Find the exact values of the six trigonometric functions of θ .

$$\sin \theta = -\frac{5}{13} \quad \csc \theta = -\frac{13}{5}$$

$$\cos \theta = -\frac{12}{13} \quad \sec \theta = -\frac{13}{12}$$

$$\tan \theta = -\frac{5}{12} = \frac{5}{12} \quad \cot \theta = \frac{12}{5}$$

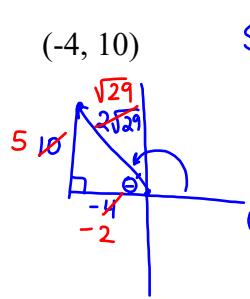

$$\sin \theta = -\frac{1}{\sqrt{2}} = -\frac{\sqrt{2}}{2} \quad \csc \theta = -\sqrt{2}$$

$$\cos \theta = \frac{1}{\sqrt{2}} = \frac{\sqrt{2}}{2} \quad \sec \theta = \sqrt{2}$$

$$\tan \theta = -\frac{1}{1} = -1 \quad \cot \theta = -1$$

The point is on the terminal side of an angle in standard position. Determine the exact value of the six trigonometric functions of the angle.

$$\sin \theta = \frac{10}{\sqrt{29}} = \frac{5}{\sqrt{29}} = \frac{5\sqrt{29}}{29}$$

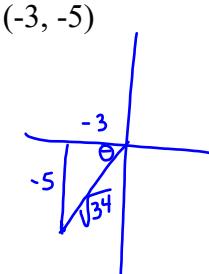

$$\csc \theta = \frac{\sqrt{29}}{5}$$

$$\cos \theta = \frac{-4}{\sqrt{29}} = \frac{-2}{\sqrt{29}} = \frac{-2\sqrt{29}}{29}$$

$$\sec \theta = \frac{\sqrt{29}}{-2} = \frac{-\sqrt{29}}{2}$$

$$\tan \theta = \frac{10}{-4} = \frac{-5}{2}$$

$$\cot \theta = -\frac{2}{5}$$

$$\sin \theta = \frac{-5}{\sqrt{34}} = -\frac{5\sqrt{34}}{34}$$

$$\csc \theta = -\frac{\sqrt{34}}{5}$$

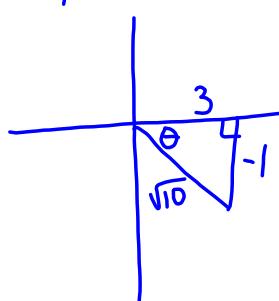

$$\cos \theta = \frac{3}{\sqrt{34}} = \frac{3\sqrt{34}}{34}$$

$$\sec \theta = \frac{\sqrt{34}}{3}$$

$$\tan \theta = 5/3 \quad \cot \theta = 3/5$$

Find the exact values of the remaining trigonometric functions of θ satisfying the given conditions.

$$\cot \theta = -3 \text{ and } \cos \theta > 0$$

$$\sin \theta = \frac{-1}{\sqrt{10}} = -\frac{\sqrt{10}}{10} \quad \csc \theta = -\sqrt{10}$$

$$\cos \theta = \frac{3}{\sqrt{10}} = \frac{3\sqrt{10}}{10} \quad \sec \theta = \frac{\sqrt{10}}{3}$$

$$\tan \theta = -\frac{1}{3} \quad \cot \theta = -3$$

The terminal side of θ lies on the given line in the specified quadrant. Find the exact values of the six trigonometric functions of θ by finding a point on the line.

$$4x + 3y = 0 \text{ and Quad IV}$$

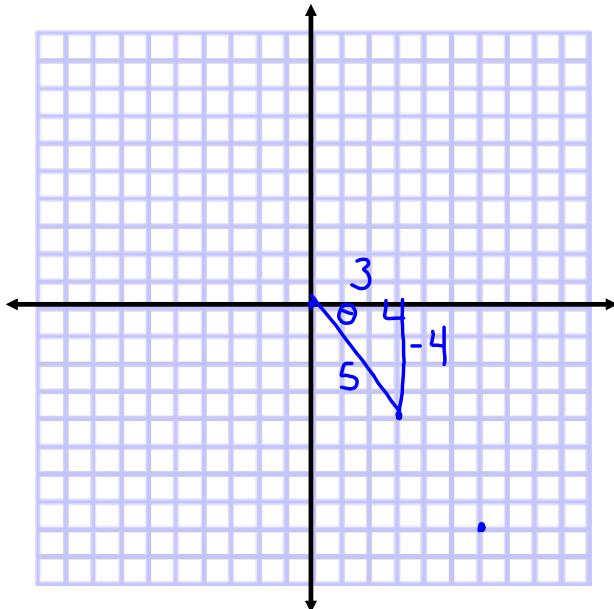

$$3y = -4x$$

$$y = -\frac{4}{3}x$$

$$\sin \theta = -\frac{4}{5} \quad \csc \theta = -\frac{5}{4}$$

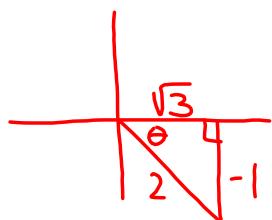

$$\cos \theta = \frac{3}{5} \quad \sec \theta = \frac{5}{3}$$

$$\tan \theta = -\frac{4}{3} \quad \cot \theta = -\frac{3}{4}$$

Use the function value to find the indicated trigonometric value in the specified quadrant.

$$\csc \theta = -2 \text{ in quad IV} \quad \text{Find: } \cot \theta = \frac{\sqrt{3}}{-1} = -\sqrt{3}$$
